

Septic Systems Fact Sheet

Office of Wastewater Management | Decentralized Wastewater Program

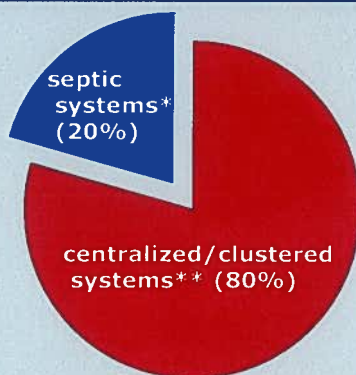

This fact sheet presents data on soil-based septic systems collected by the U.S. Census Bureau for the 2007 American Housing Survey, based on a sampling of 55,000 housing units.

Septic System Use

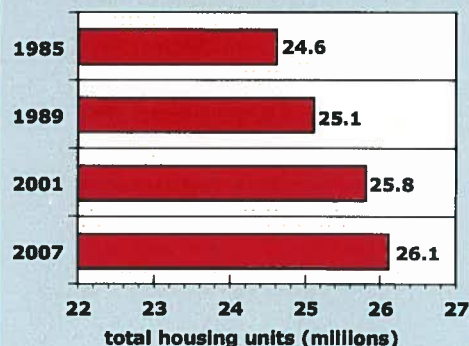

■ In 2007, an estimated **20 percent** (26.1 million) of total U.S. housing units were served by septic systems. This is an increase of 1.54 million septic systems since 1985.

■ In 2007, **22 percent** (1.6 million) of all housing units less than 4 years old used septic systems.

Demographics

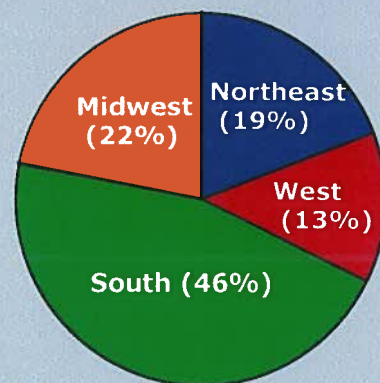

■ In 2007, **50 percent** (13.1 million) of total housing units with septic systems in the United States were in rural areas, **47 percent** (12.3 million) were in suburbs, while **3 percent** (774,000) were found in central cities.

■ In 2007, **46 percent** (10.1 million) of occupied housing units with septic systems were located in the southern region of the United States, followed by the midwest with **22 percent** (4.8 million), the northeast region with **19 percent** (4.2 million), and the west with **13 percent** (2.9 million).

Total housing units served by septic systems, by rural/urban/suburban classification

Occupied housing units served by septic systems, by U.S. Region***

*Total housing units served by a soil-based septic system for 5 or fewer units.

**Total housing units connected to a city, county, sanitary district, neighborhood, or subdivision sewer system serving 6 or more units (includes centralized and clustered onsite systems).

***Based on occupied housing units served by a soil-based septic systems (total housing units not available by region). Source: U. S. Census Bureau - American Housing Surveys for the United States, 1985 through 2007, Tables 1A-4, 1B-4, 1C-4, 1D-4, and 2.4.

The American Housing Survey is conducted by the U.S. Census Bureau, Housing and Household Economic Statistics Division every two years to determine up-to-date housing statistics. Field data cover an average of 55,000 housing units. A sample of housing units in all survey areas was selected from the decennial census. The survey goes back to the same housing units on a regular basis, recording changes in characteristics, adding and deleting units when applicable. This cross-sectioning of the housing inventory gives a picture of houses and households as they change over long periods of time. Since these estimates are based on samples, they may differ from the results that would have been obtained if a complete census had been taken under the same interviewing conditions.
